

Parallel Pack

For Top-Load Case Packers

Faster throughput, built into your footprint.

Our Parallel Pack capability evenly distributes cases across two lanes, enabling side-by-side packing at speeds up to 120 cases per minute.

By keeping both lanes running simultaneously, the Model 2800 Case Packer delivers higher throughput without expanding your footprint, helping you do more with the space you already have.

TW HARTNESS

Eliminates the need for two Case Packers!

Add the three-foot Case Merge feature to seamlessly combine both lanes into one at the case packer discharge.

Don't need all that speed today?

Choose the Parallel Pack Ready Option

This approach allows you to run the rates you need now while future proofing your operation for later. When demand grows, let us know and we can perform the upgrade that allows you to run faster rates without replacing your packer, delivering meaningful cost savings compared to buying new equipment.
